

Rubric calibration worksheet (solo)

Use this worksheet to fill in **Phase 1** and **Phase 3** by yourself! Use the [group worksheet](#) to fill in **Phase 2** and **Phase 4** as a group. Full instructions [here](#).

Make your copy first. Do not type into this template.

File, then **Make a copy**. If you cannot type into a doc, you are in the template.

The plan (40 minutes)

1. Grade the four issues. 10 minutes, solo, in this doc.

2. Disagreement log + synthesis. 15 minutes, together, in the group doc.

3. Revision marks. 10 minutes, solo, in this doc.

4. Debrief. 5 minutes, together, in the group doc.

Phase 1: grade the four issues

By Yourself · 10 minutes

Write your three check names below, taken from the Check column of your rubric.

Open the four bundles under eval/issues/ in your Unit 1 materials and take one bundle at a time: read it in full, then write P (condition met), F (not met), or ? (not enough evidence) in each check cell of that bundle's row.

Combine your three grades with your verdict rule and write accept or reject in the Verdict cell.

Grade the bundle only, never the live issue on GitHub.

Check 1

pull request accepts

Check 2

COMMITTS recent

Check 3

Response times

Issue	Check 1	Check 2	Check 3	Verdict
calib-00 (example)	P	F	?	reject
calib-01 (p5.js)	P			Approved
calib-02 (minikube)		F		reject
calib-03 (HTTPIe)		F		reject
calib-04 (bat)		F		reject

Phase 3: revision marks

By Yourself · 10 minutes

Phase 2 happens first, in the group doc. Come back here after the argument.

Fill one block per change your rubric needs. Write marks only; the full rewrite happens at home, in rubric.md.

If you need more than three blocks, copy a whole one and paste it at the end.

Done early? Start the homework: the Activity tab's After class steps get your rubric into rubric.md and the eval harness running for the first time.

Mark 1

Change (add / drop / tighten / demote / promote)

Add

Check

Approve

Which disagreement motivated it (or gap plus the issue)

Repo commits and approved pull requests were closely up to date

Mark 2**Change (add / drop / tighten / demote / promote)**

drop

Check

Reject

Which disagreement motivated it (or gap plus the issue)

Repo commits and approved pull requests were not closely up to date

Mark 3**Change (add / drop / tighten / demote / promote)**

drop

Check

Reject

Which disagreement motivated it (or gap plus the issue)

Repo commits and approved pull requests were not closely up to date
